Problem Number	Possible Points	Points Earned
I	50pts	
II	20pts	
III	30 pts	
Total Points	100pts	

I

Answer the following questions by clearly circling your answers. No partial credit is awarded for questions in part I.

(1) Which of the expressions below equal $(\mathbf{A} \cdot \mathbf{B} \cdot \mathbf{C})^{-1}$ (circle all that apply)

(a) $\mathbf{A}^{-1} \cdot \mathbf{B}^{-1} \cdot \mathbf{C}^{-1}$
(b) $\mathbf{A}^{-1} \cdot \mathbf{C}^{-1} \cdot \mathbf{B}^{-1}$
(c) $\mathbf{C}^{-1} \cdot \mathbf{A}^{-1} \cdot \mathbf{B}^{-1}$
(d) $\mathbf{C}^{-1} \cdot \mathbf{B}^{-1} \cdot \mathbf{A}^{-1}$

(2) Which of the expression below correspond to the determinant of the matrix

$$7 \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ 0 & a_{22} & a_{23} \\ 0 & 0 & a_{33} \end{pmatrix}$$

(a) $-a_{13}a_{22}a_{31} + a_{12}a_{23}a_{31} + a_{13}a_{21}a_{32} - a_{11}a_{23}a_{32} - a_{12}a_{21}a_{33} + a_{11}a_{22}a_{33}$
(b) $7a_{11}a_{22}a_{33}$
(c) $7^2a_{11}a_{22}a_{33}$
(d) $7^3a_{11}a_{22}a_{33}$

(3) Let V denote the vector space $\mathbb{C}^{3\times3}$ Which ones of the subsets of V below are not subspaces of V? (circle all that apply)

(a) The set of diagonal 3×3 matrices.
(b) The set of 3×3 matrices for which $\det(\mathbf{A}) \neq 0$.
(c) The set of 3×3 matrices for which $\det(\mathbf{A}) = 0$
(d) The set of 3×3 matrices for which $\mathbf{A}^2 = -\mathbf{I}$
(e) The set of 3×3 matrices for which $\mathbf{A} \cdot \mathbf{A}^T = \mathbf{I}$

(4) Which statements below are true (circle all that apply)

(a) If $\det \mathbf{A} = 0$ then Row Echelon Form of $\mathbf{A}$ corresponds to the identity matrix.
(b) For every 3×3 matrices $\mathbf{A} \cdot \mathbf{B} = \mathbf{B} \cdot \mathbf{A}$
(c) Let $\mathbf{B}$ denote the matrix which result from interchanging the first and the second row of $\mathbf{A}$. Then it necessary follows that $\det(\mathbf{A}) \neq \det(\mathbf{B})$.
(d) The product of two diagonal matrices always results in a diagonal matrix.

(5) What is the value of the determinant of the matrix

$$\begin{pmatrix} 1 & 2 & 3 & 4 & 3 \\ 2 & 4 & 5 & 1 & 6 \\ 3 & 5 & 1 & 9 & 9 \\ 4 & 4 & 6 & 8 & 12 \\ 5 & 4 & 5 & 6 & 15 \end{pmatrix}$$

(a) 7
(b) -3
(c) 0
(d) 1

II (20 pts)

Express the inverse of the matrix $\mathbf{A}$ as a product of elementary matrices.

$$\mathbf{A} = \begin{pmatrix} 4 & 5 & 1 \\ 1 & 0 & 0 \\ 1 & 3 & 3 \end{pmatrix}$$

Answer:

III (30 pts)

a) Let $\mathbf{U}$, $\mathbf{V} \in \mathbb{C}^{3\times 3}$, find in terms of $\mathbf{U}$ a parametric description for the set of all matrices $\mathbf{V}$ such that
$\det(\mathbf{U}+\mathbf{V}) = \det \mathbf{U} \neq 0$. Use in your derivation the family of matrices with determinant equal to 1.

b) Using the permutation expansion of the determinant of $\mathbf{A} \in \mathbb{C}^{5\times 5}$, show that $\det \mathbf{B} = \det \mathbf{A}$, if the 5×5 matrix $\mathbf{B}$ is obtained from $\mathbf{A}$ via the row linear combination operation

$$7 \cdot \mathrm{R}_4 + \mathrm{R}_5 \to \mathrm{R}_5.$$

c) Without assuming the multiplicative property of the determinant prove that for $\mathbf{A} \in \mathbb{C}^{5\times 5}$ and $\mathbf{B} \in \mathbb{C}^{5\times 5}$

$$\det\left\{\mathrm{REF}_{\star}\left(\mathbf{A}\right) \cdot \mathrm{REF}_{\star}\left(\mathbf{B}\right)\right\} = \left(\det \mathbf{A}\right) \cdot \left(\det \mathbf{B}\right)$$
